melting furnace FERGAL type A-157 - year 2000

With semi-humid floor

Designed to the melting of aluminium, this type of furnaces (A-157) fuses for allegation and radiation. Loading of material happens on the semi-humid sole in contract with the liquid metal. Advantage consists in the drying of loads avoiding explosions due to the humid material and exploitation of the heat in direct way. Combustion is supplied with methane or LPG. The capacity of the basin is from 2.000 to 10.000 kg. with manual books
