The ARIANA Maintenance Station R-3000 suctions off a mixture of oils and particulate matter from the surface of the emulsion.

This mixture is separated in the maintenance station, the cleaned emulsion is conducted back into the machine tool and the separated oil is collected in a separate disposal container.

The process of separating the emulsion and oil is purely physical and is so gentle that the emulsion is not negatively affected, e.g. as it would be a result of spinning. 97% of floating trash oil and trash oil subjected to turbulence is removed.

The emulsion is cleaned without the presence of an operator and without interrupting operation of the machine tool. No down time occurs.

Technical features

Eccentric worm pump

Electric motor

Made of stainless steel material with powder coating

All hose connections with fast-action single-hand connectors
Station is completely assembled and ready for use, complete with accessories

Motor capacity	0,37 kWh
Voltage	230 V
Flow rate	550 L/h
Dimensions (mm)	860 x 1200 x 470 (H x L x B)
Weight empty	86 Kg
Temperature of liquid	40°C (max.)
Filter fineness (standard)	100 µ
